To Whom It May Concern,

RE: APPLICATION FOR ICT / SOFTWARE ENGINEERING / DATA SPECIALIST ROLES

I am a versatile IT professional eager to contribute to your software engineering, data, or system infrastructure workflows. Combining a background in computer science and information studies with hands-on experience in full-stack development, data automation, and network administration, I deliver scalable digital solutions.

Key highlights of my qualifications include:

- **Data Automation:** As an ICT Intern, I engineered Python and Pandas scripting frameworks to automate the cleaning and merging of multi-sheet Excel files, reducing manual processing times by over 80%.
- **Infrastructure & Support:** Proven capability in managing local network architectures, resolving technical system drift, configuring routing tables, and diagnostic hardware troubleshooting from my time at KETRACO.
- **Full-Stack UI Development:** Active experience building modular, responsive user interfaces and dashboards using React, Vite, and modular CSS layouts.

My academic background – holding a B.Sc. in Computer Science alongside a Diploma in Information Studies – gives me a unique edge in managing both complex application logic and formal information frameworks.

I maintain live project repositories and documentation directly on this portfolio space. I welcome the opportunity to discuss how my automation mindset and proactive troubleshooting skills can add immediate value to your technical team.

Thank you for your time and consideration.

Sincerely,

Robinson Kipkorir
